

Changing the Planning Language

If Essbase is set to a language other than English, the language should be changed in Planning to improve the stability of the Planning JVM during periods of heavy usage. In order to change the Planning language, open the `setCustomParamsPlanning.bat` (Windows) or `SetCustomParamsPlanning.sh` (Unix) located in the `MIDDLEWARE_HOME/user_projects/epmsystem1/bin` folder. The following is an example of the statements to add when the Essbase language is set to Traditional Chinese:

```
"-Dcom.hyperion.planning.codepage=EUC-TW"
```

```
"ESSLANG"="TraditionalChinese_Taiwan.EUC-TW@Binary"; export ESSLANG
```
